Select- Turn User Accounts on or off  
Uncheck- Use User Account Control (UAC)  
Click- OK

Please be sure to save any open work as settings changes may require a restart of your computer.

### **Facebook PRO Software Instructions :**

The software was designed to extract names and emails from Facebook friends. This allows generating a lead list in short time.

To use the software:

1. User need to login inside his Facebook account. Application has an embedded browser that will show the Facebook login when open the software.
2. Once logged user need to find friends. This can be done pressing the Find Friends button at the top. Application will freeze a moment since it need to connect with Facebook using a protected protocol, this take just few seconds and a warning message advice user to wait this time.
3. Application will put extracted friend's data in a list where you can see the Friend Name and the URL of the Facebook Profile.
4. At this point you can select and delete a group of friends before extract

emails. It is important to know that the application saves every change automatically. So you can close the tool here and open later and continue at this point extracting emails. You can also start extracting from a particular friend. This is very useful if Facebook banned user for a few minutes. You can stop the email extraction process and continue later.

5. Now is the time to extract. User can choose a random delay before every web request; longer intervals increase your opportunities to bypass Facebook protections. After choosing the delay, press the Extract Emails button.

6. The application will be selecting each item and will extract the emails from the Facebook profile.

7. To finish, you can export the results to a csv file using the Save Results button.

Have Fun
